Personal Projects

sfsu-maps.vercel.app   **github.com/Alex-RV/sfsu_maps**

Next.js Website

- Website that helps students find their class location with exact coordinates utilizing Google Maps API. It asks for the student's classes and creates a map based on that information so the student can have a customized map and have less chance of getting lost.
- It was successfully deployed on Vercel.
- Best design at SF State Code Jams

diego-rey-2003.github.io   **github.com/diego-rey-2003/diego-rey-2003.github.io**

Portfolio Website

- Portfolio website with all my information.

Not to Persuade   **NOT TO PERSUADE (NTP) por Régimen Caobos.**

Preventive algorithm   **Para Sabana Hack 2020.**

- Created an Algorithm for my first Hackathon that identified when a conversation on Instagram had potential danger for the user. First place nationwide.
- The program identified keywords that would trigger a message telling the user to be careful with its conversation.
